Minister for Roads, Maritime and Freight

# “The Wave”

- \$41.5 bil invested on Transport over 4 years
- Approx 57% of NSW budget (\$73.3 bil)

*2016-17 NSW Budget*

# What is Digital Engineering?

- DE is simply a collaborative way of working, using digital processes, to enable more productive methods of planning, designing, constructing, operating and maintaining our assets
- This is achieved by creating a Common Data Environment (CDE), that aligns digital information systems including CAD, GIS, 3D BIM, electronic document management, project controls (time, cost, risk etc), asset data and other related systems.
- DE provides faster, clearer and more accurate project and asset information
- Enables greater capability, quality and cost effectiveness for:
  - Strategic planning
  - Project outcomes
  - Asset management
  - Broader network operations

# Transport Networks

**Rail Network**

**Road Network**

# Vertical vs Linear Infrastructure

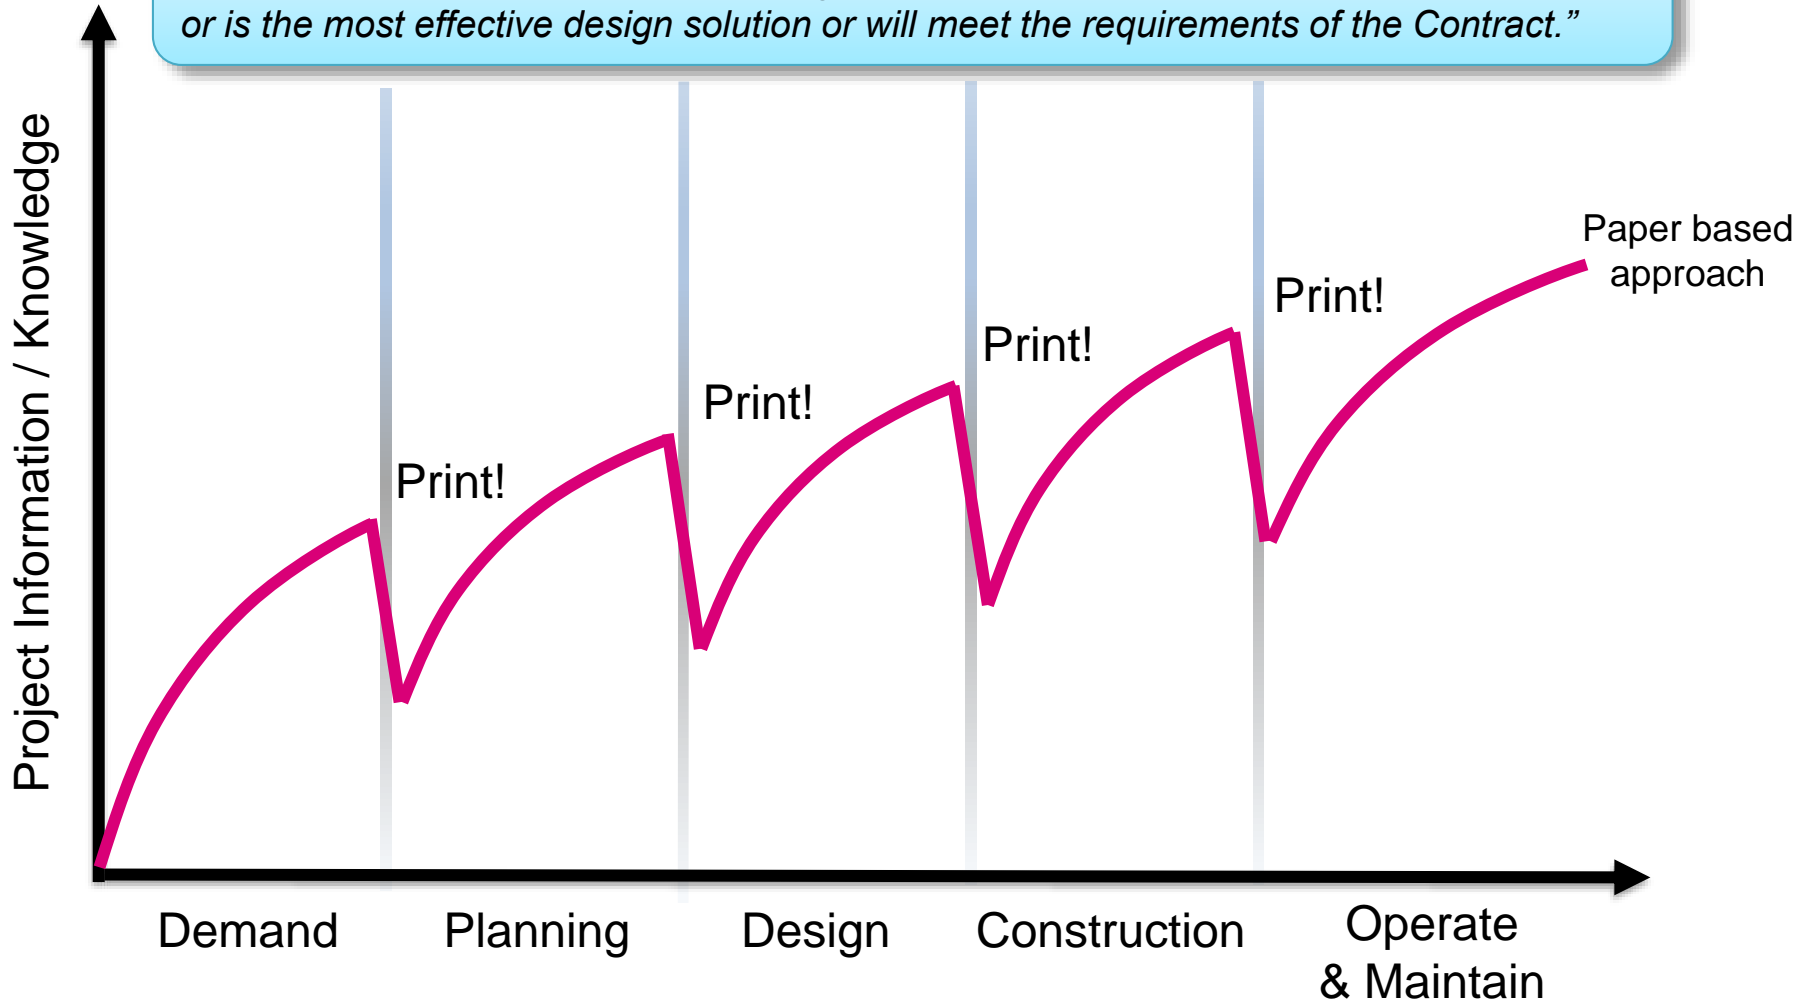

Factors impacting BIM	Vertical Infrastructure	Horizontal Infrastructure
<b>Description</b>	The discrete buildings which support our physical accommodation, business activities and health needs	The networks of built assets that provide service and must connect through constrained gradients and curves
<b>Example</b>	Housing, office buildings, hospitals	Road and rail lines
<b>3D Design Methodology</b>	Object-based modelling	String and alignment-based modelling
<b>Location Breakdown</b>	A simple hierarchical breakdown is sufficient e.g. IFC	A linear breakdown consisting of a combination of lines, points and distance along lines e.g. Asset Classification
<b>Geometric Models</b>	Object geometry is set in local coordinates, meaning model coordinates can only be extrapolated to the real world with difficulty.	String and point “real-world” GDA coordinates are required ie GIS
<b>Service Performance</b>	Contribution to organisation strategic objectives (Corporate Real Estate approach or Strategic FM)	Network performance and maintenance of service delivery, such as maintaining uninterrupted journeys along a road.
<b>Status of Information Use</b>	Mature BIM models for design, data management and information exchange to asset management (COBie)	Lacking an exchange format to asset management

\* Note: many infrastructure projects mix these two types, such as entrance roads and landscaping for building projects, or bridges and stations on rail corridors.

# Traditional Projects

*"The Principal does not warrant, guarantee, represent or assume any duty of care to the Technical Advisor that the Tender Design is accurate, adequate, suitable or complete, or is the most effective design solution or will meet the requirements of the Contract."*

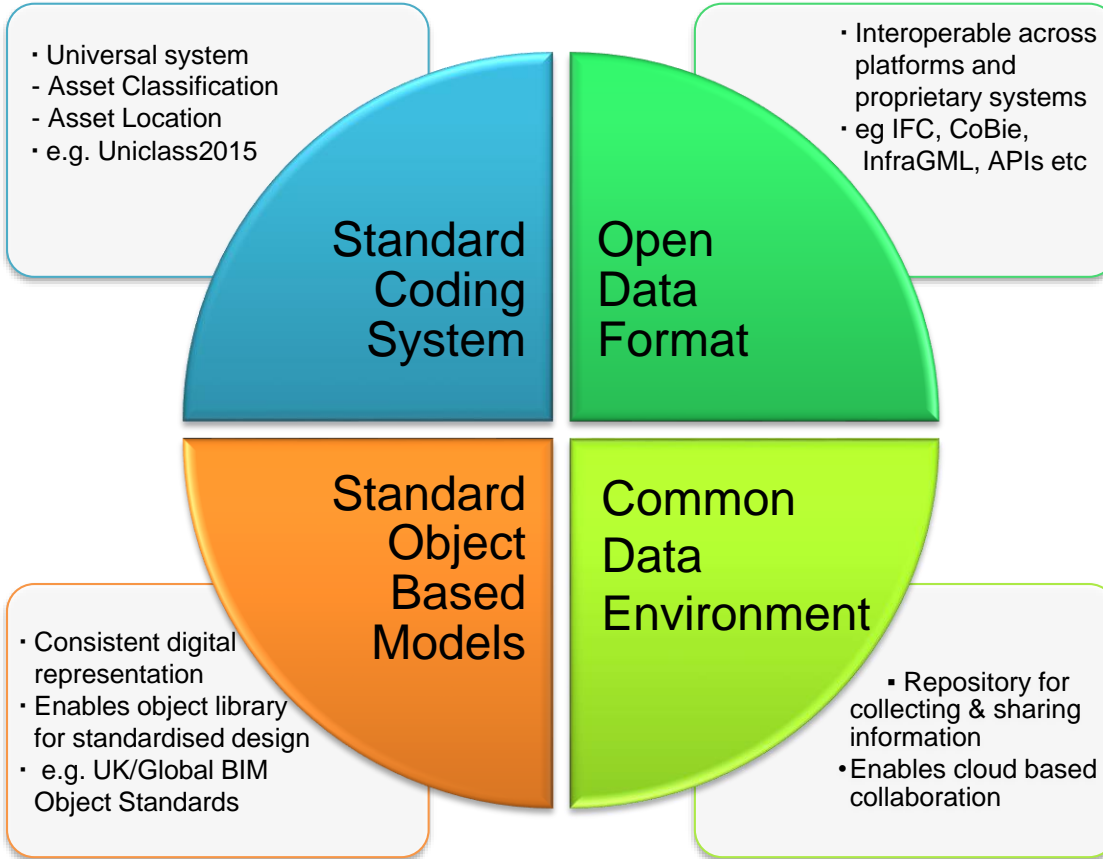

# Digital approach

# DE Elements

# DE Benefits

- Seamless data transition (handover)
- Accelerated understanding of failures or incidents
- More cost effective decisions
- More targeted, preventative maintenance
- Information mobility

- Improved safety
- Reduced risk
- Improved cost estimating
- Reduced rework
- Off-site fabrication
- Schedule optimisation
- Improved procurement

- Reduced risk
- Improved cost certainty
- Improved baseline data
- Improved optioneering for faster decisions
- Reduced site investigation
- Improved prior knowledge

- Improved design coordination
- Clash detection
- Improved accuracy & drawings
- Early visualisation
- More effective consultation
- Improved configuration control & requirements management

# Recent Projects

# Where we are now

Mostly led by Contractors

Evolving contract req'mnts

Single purpose or phase

Basic 3d model

Deliverables in PDF and paper

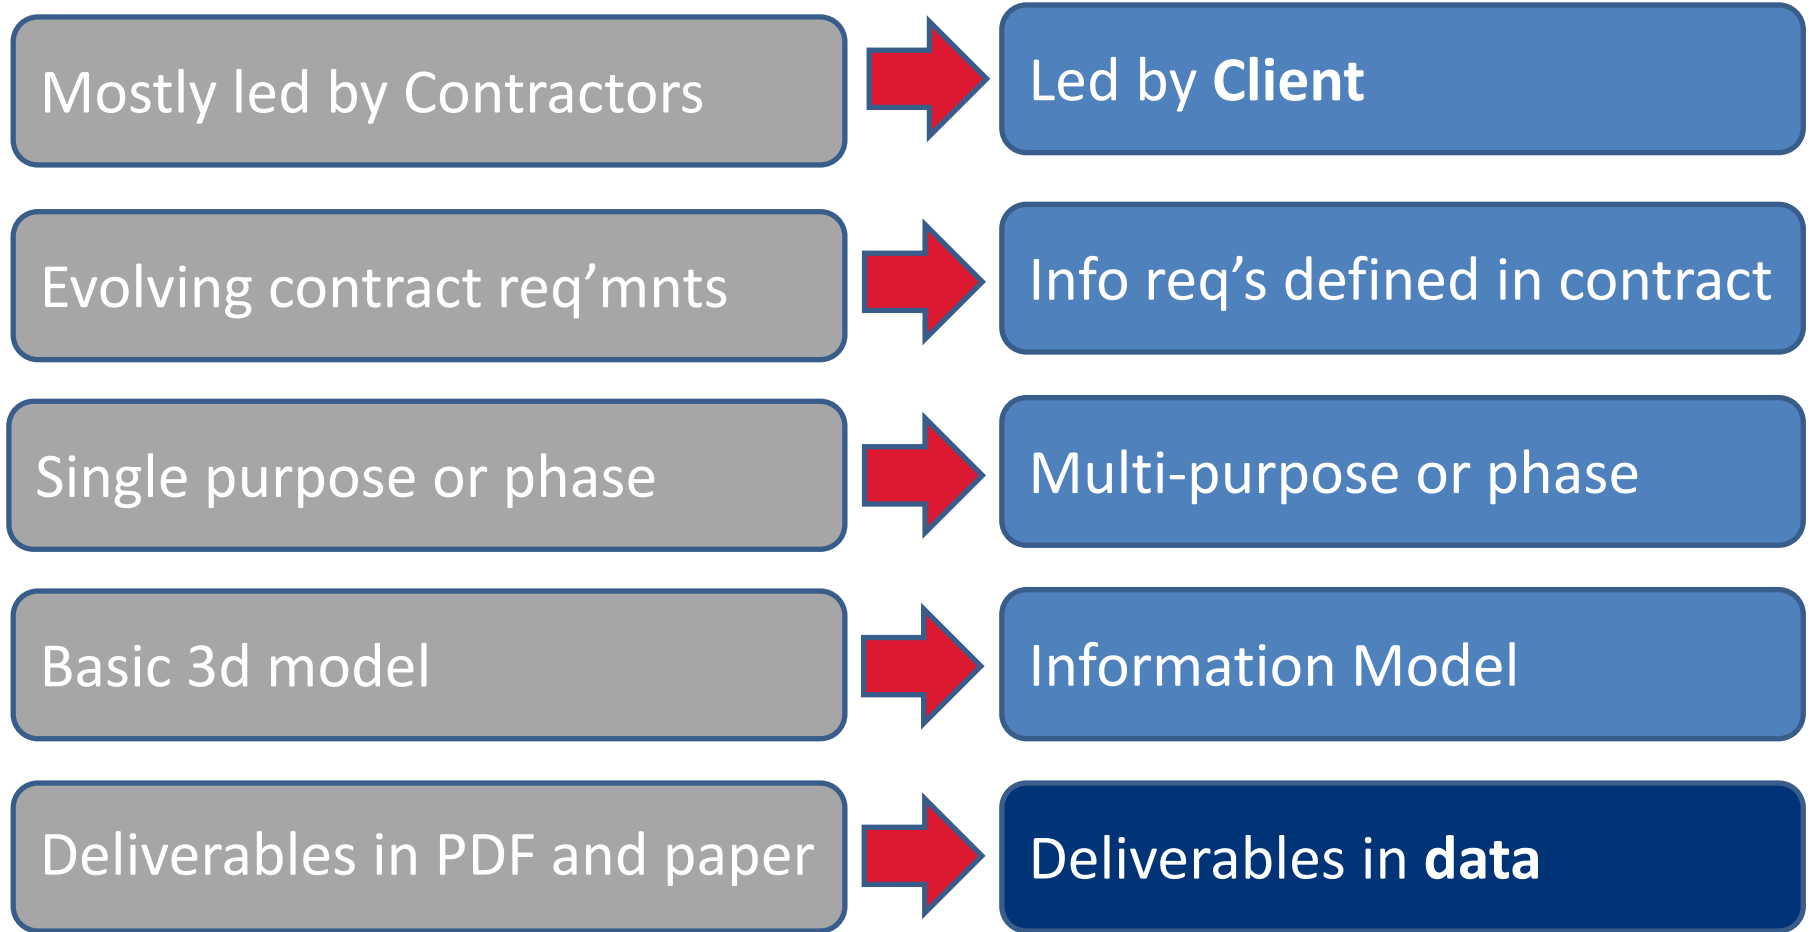

# Emerging Risk

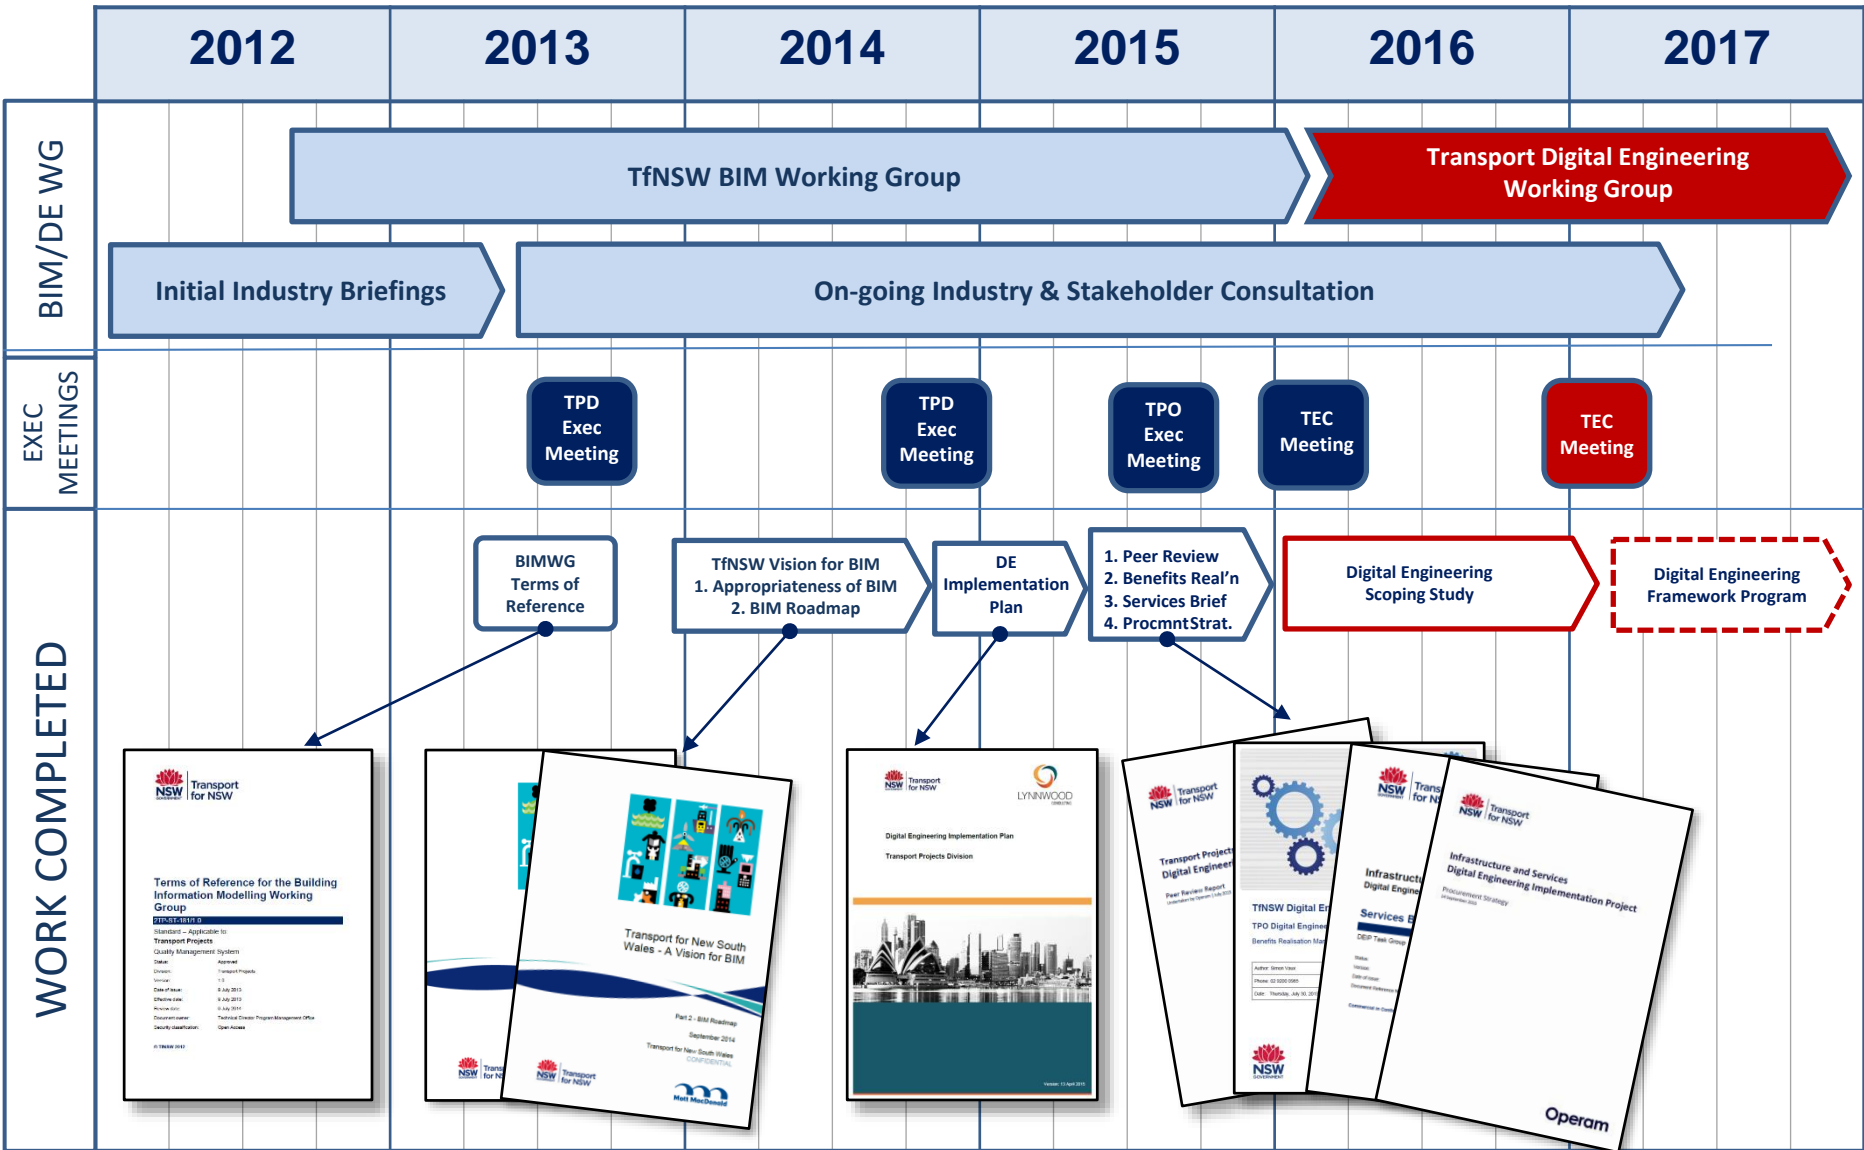

- Developments occurring independently
- Growing ad-hoc, uncontrolled
- No clear direction from either public or private sectors
- Similar issues with GIS
- 2 options:
  - Do nothing, spend more later to fix
  - Spend money now, to harness benefits

# Where we need to be

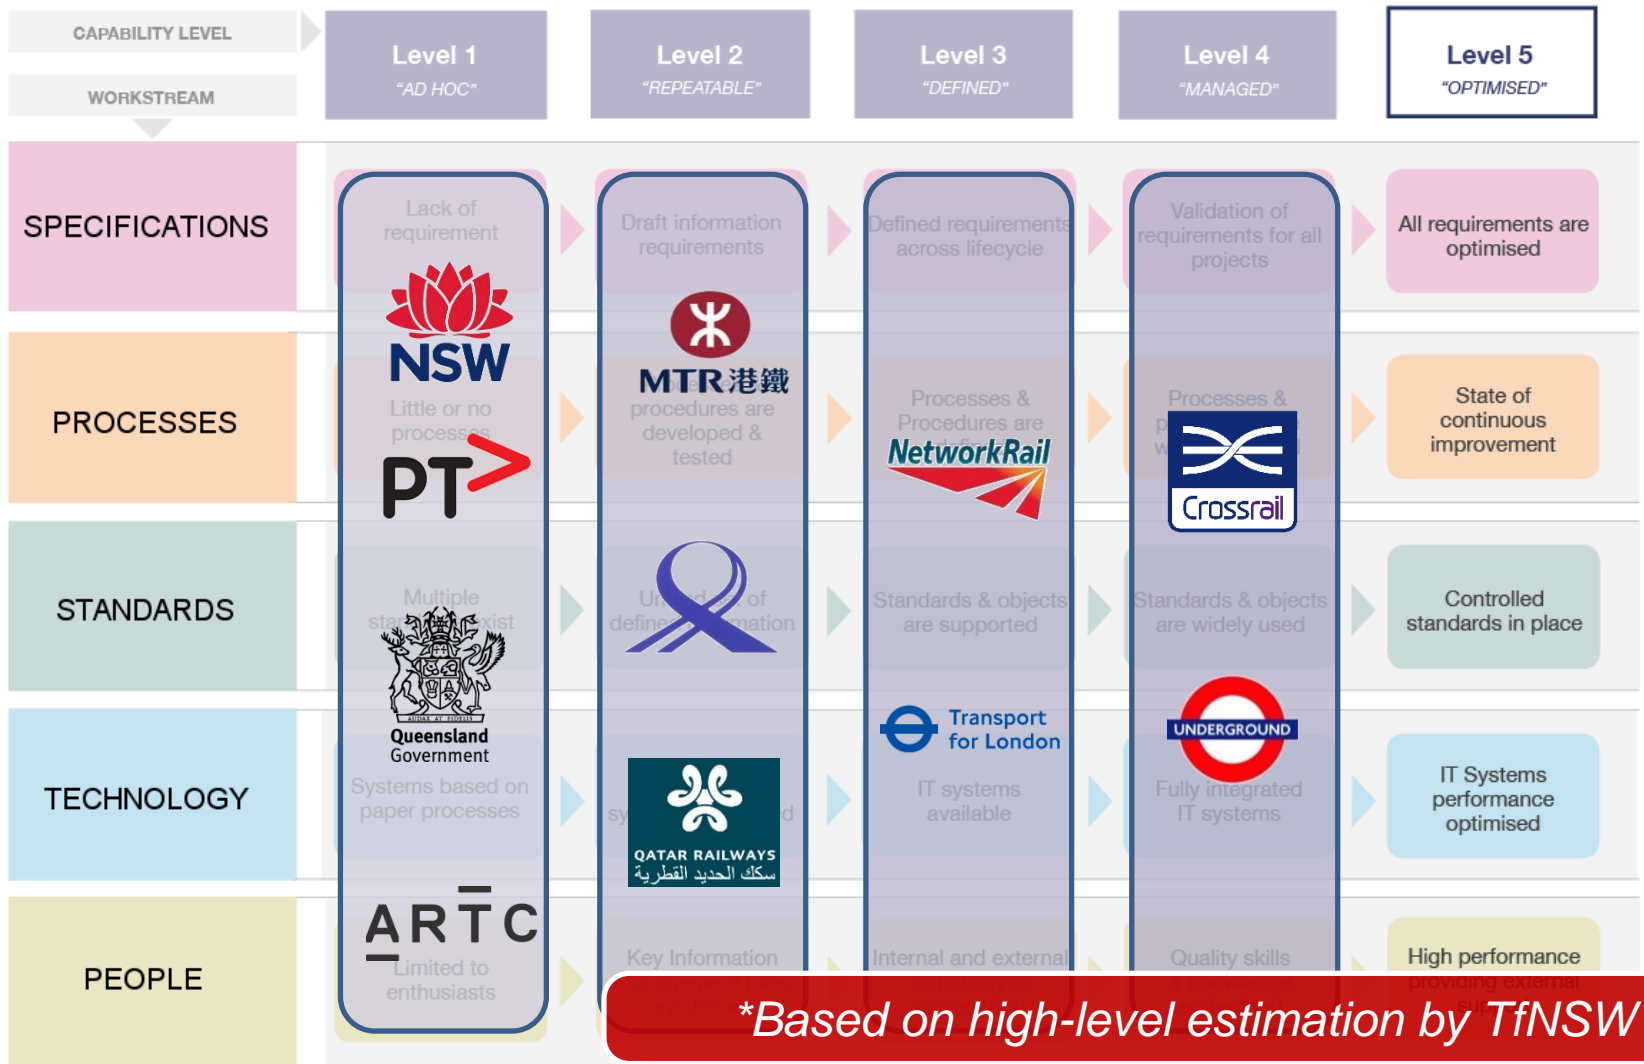

**Need for overarching strategy**

# BIM Maturity Matrix

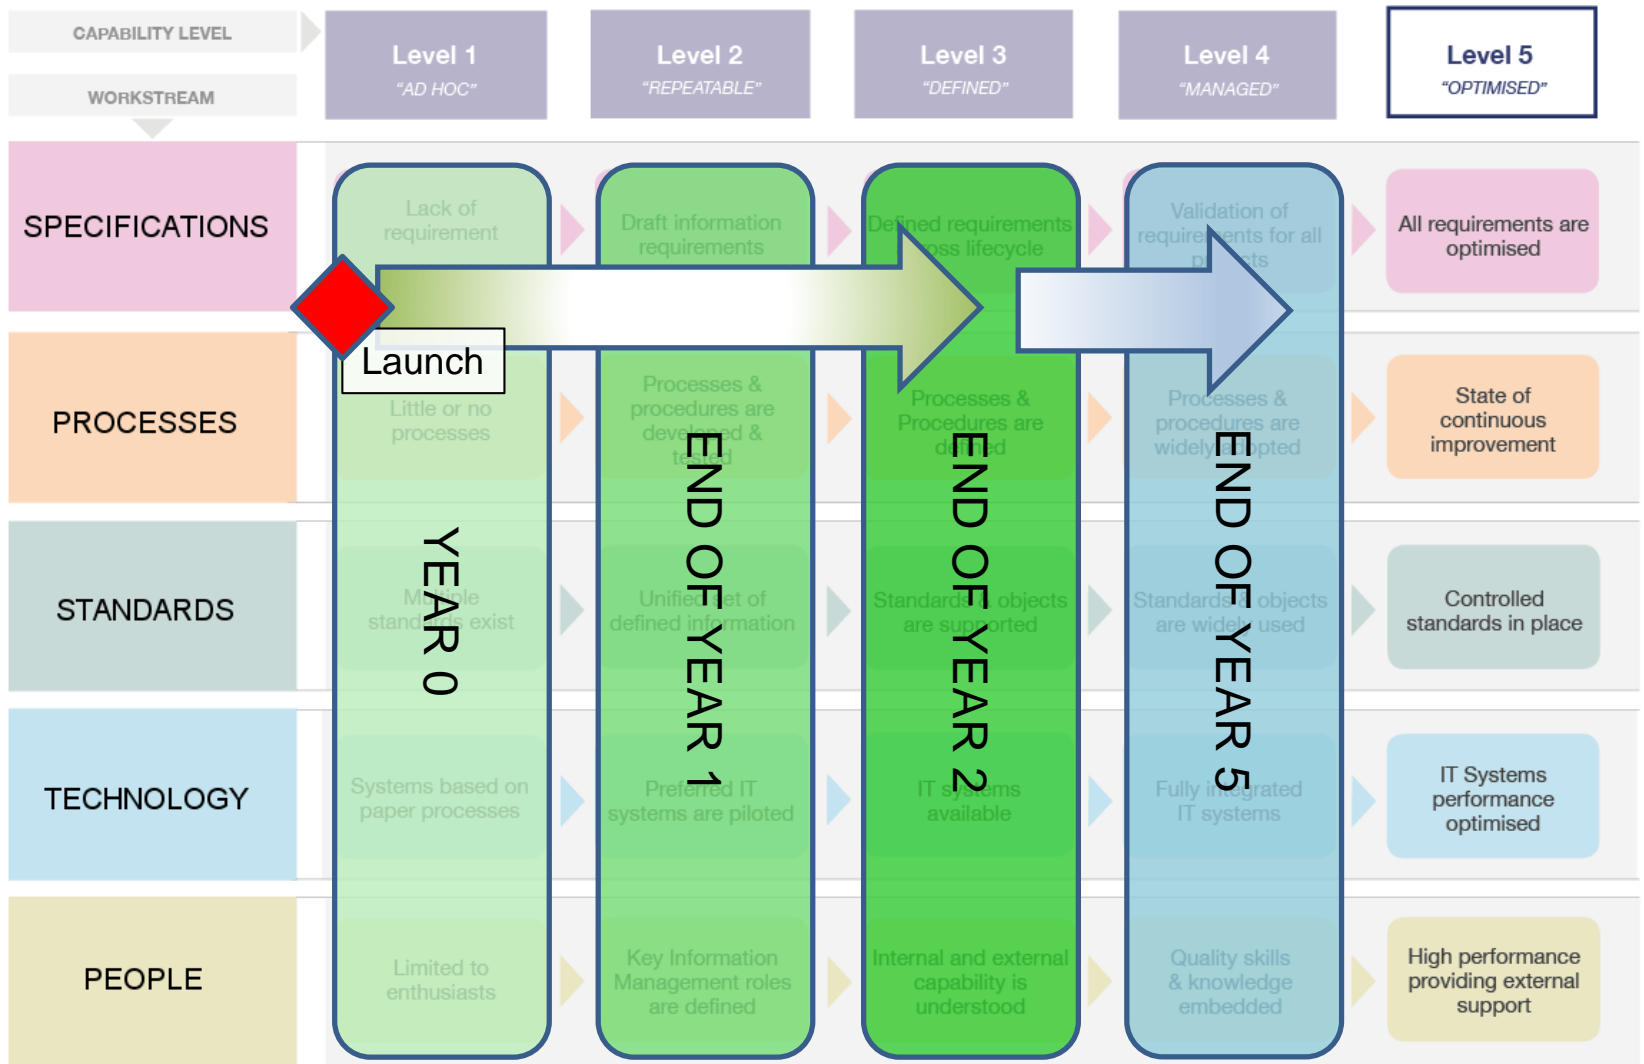

# BIM Maturity Matrix

I&S DE Implementation Plan

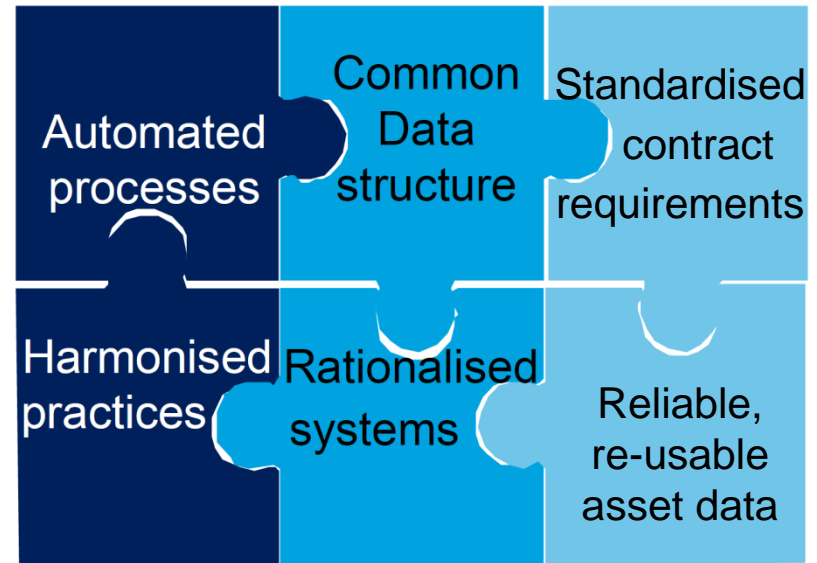

Interim Project Controls

# Initial Recommendations

**As-Is State**

**Future State**

# Asset Information Policy

*“To enable individuals responsible for delivering and managing a safe, sustainable and integrated transport system, to have the **right asset information**, at **the right time**, to make **informed decisions**”.*

Source: AIIM

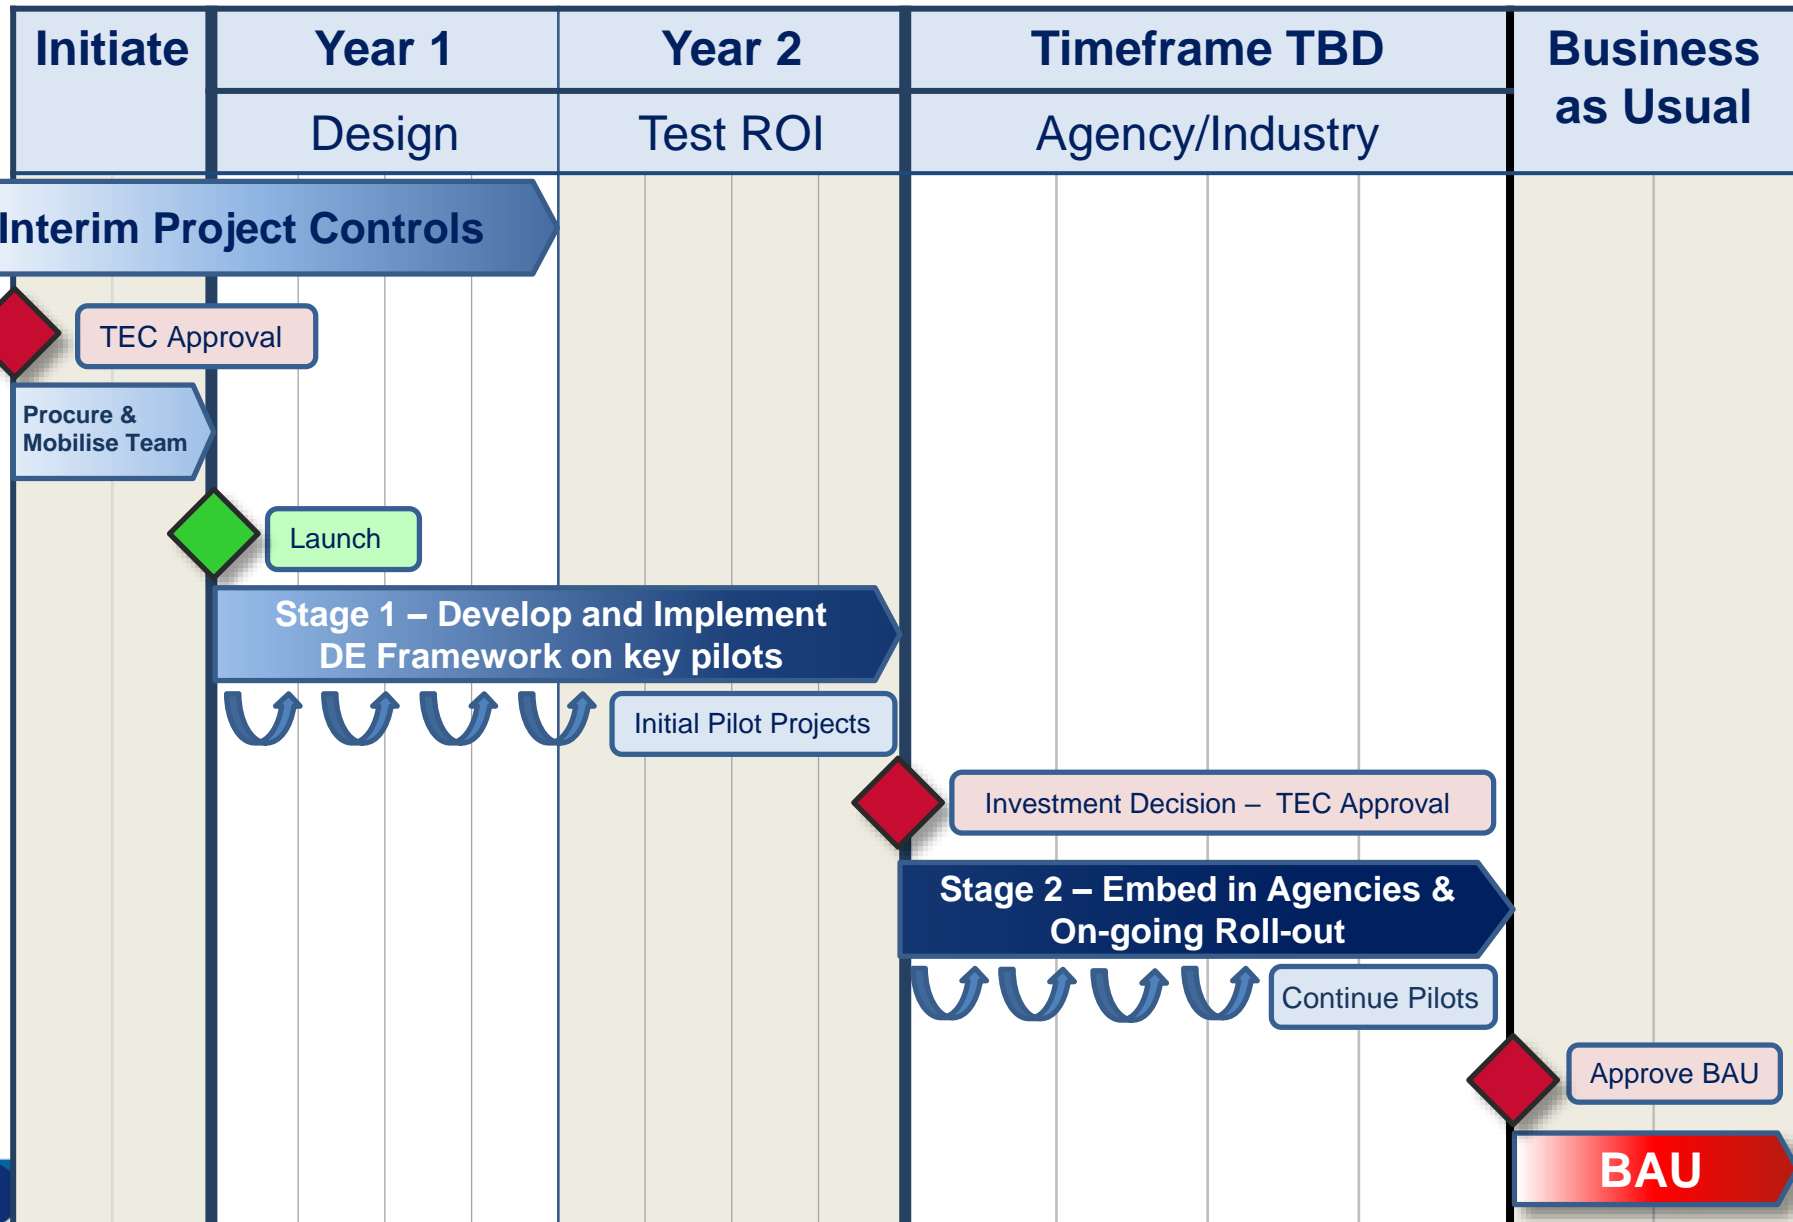

# Asset Information Principles

Principle	Details
<b>Single Source</b>	Ensuring asset data is accurate, current, reliable and not duplicated
<b>Collaboration</b>	Increasing access and sharing, reducing latency for improved decision making
<b>Automation</b>	Reducing or eliminating manual work associated with creating or sharing data
<b>Interoperability</b>	Reducing or eliminating double handling or translation of data between systems
<b>Mobility</b>	Enabling access to and input of data from multiple locations including the field
<b>Visualisation</b>	Incorporating methods to develop, coordinate and check asset data spatially
<b>Data Governance</b>	Complying with information management policies, including open data, data custodianship & security

# DE Workstreams

Workstream	Aims
 <p>People, Competency &amp; Capability</p>	<p>To develop education, training, assessment and change management programs, to enable DE competence and capability throughout Transport, O&amp;Ms and the supply chain.</p>
 <p>Information Requirements</p>	<p>To develop consistent client requirements for project and asset information for key decision points throughout the asset lifecycle.</p>
 <p>Processes &amp; Procedures</p>	<p>To develop consistent business procedures, that enable collaborative and automated information management processes throughout the asset lifecycle.</p>
 <p>Standards &amp; Objects Library</p>	<p>To develop consistent data standards, that enable information to be interoperable, reliable and re-usable throughout the asset lifecycle.</p>
 <p>Technology</p>	<p>To leverage IT tools and systems, that support collaborative processes, to enable data to be mobile, visualised, accessible from primary sources of truth and integrated with the EAM and other enterprise systems.</p>

# DE Project

# BCR (Stage 1)

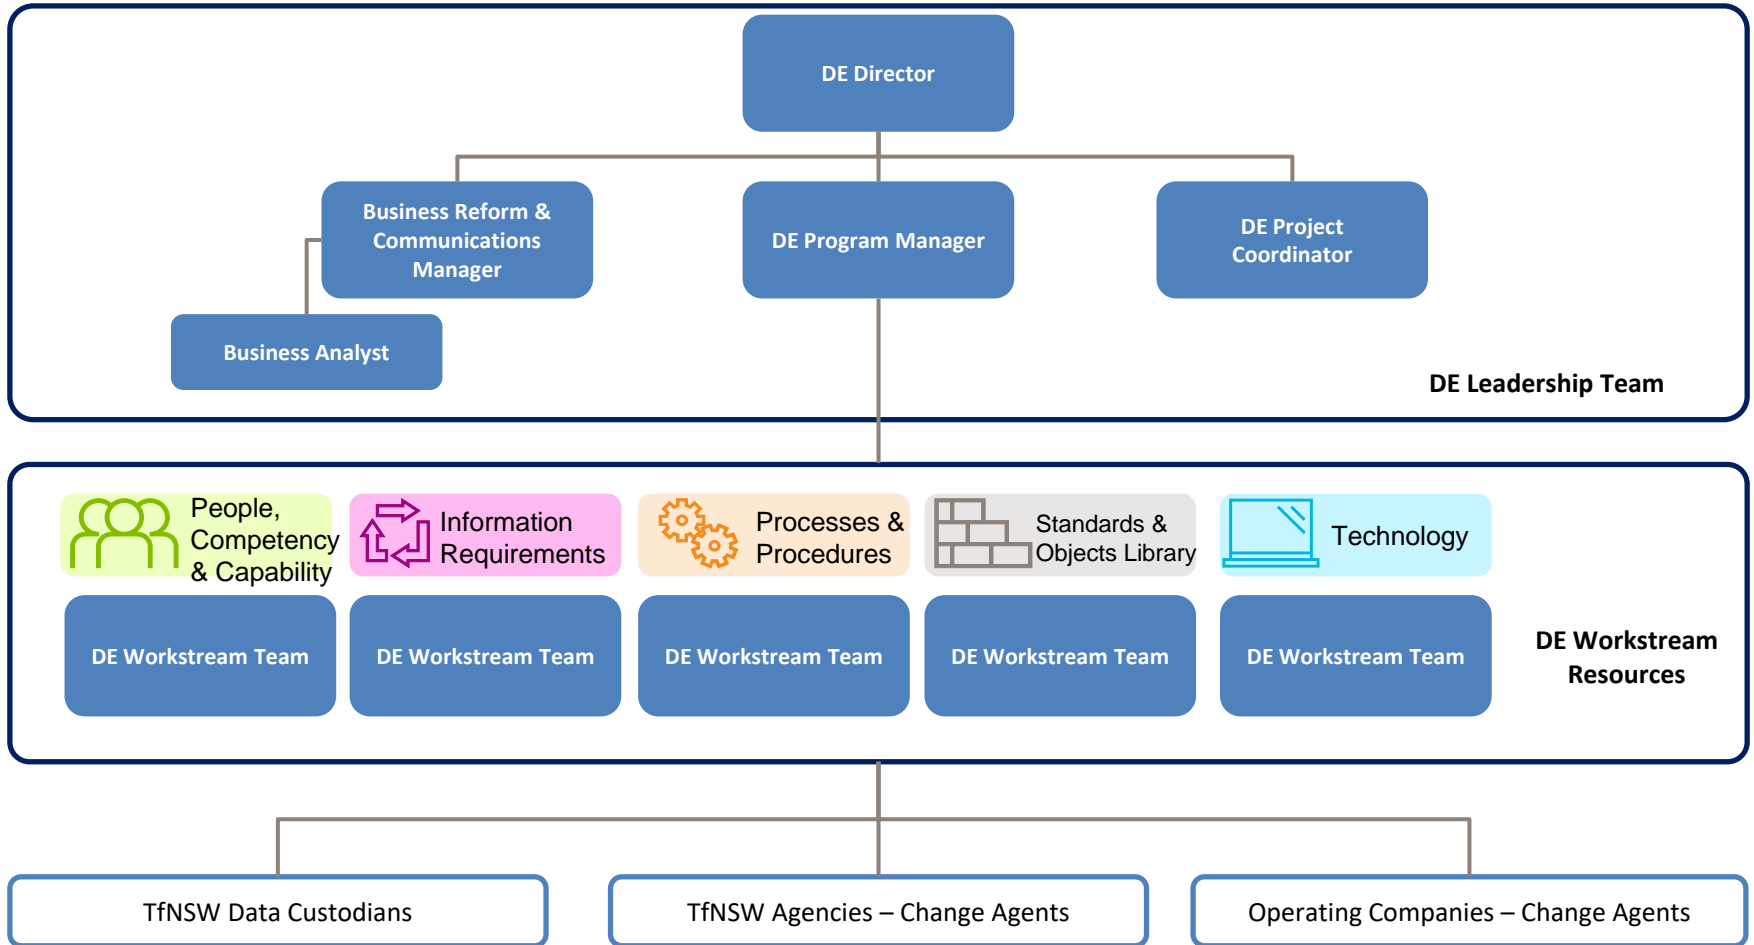

Item	At 1.7% (Project Case Study)	At 0.5% (Sensitivity Test)
Total Cost (Initiation & Stage 1)	\$18M	\$18M
Total Benefit	\$228M	\$69M
Net Benefit	\$210M	\$51M
Estimated BCR Stage 1	12.7	3.8

## Note:

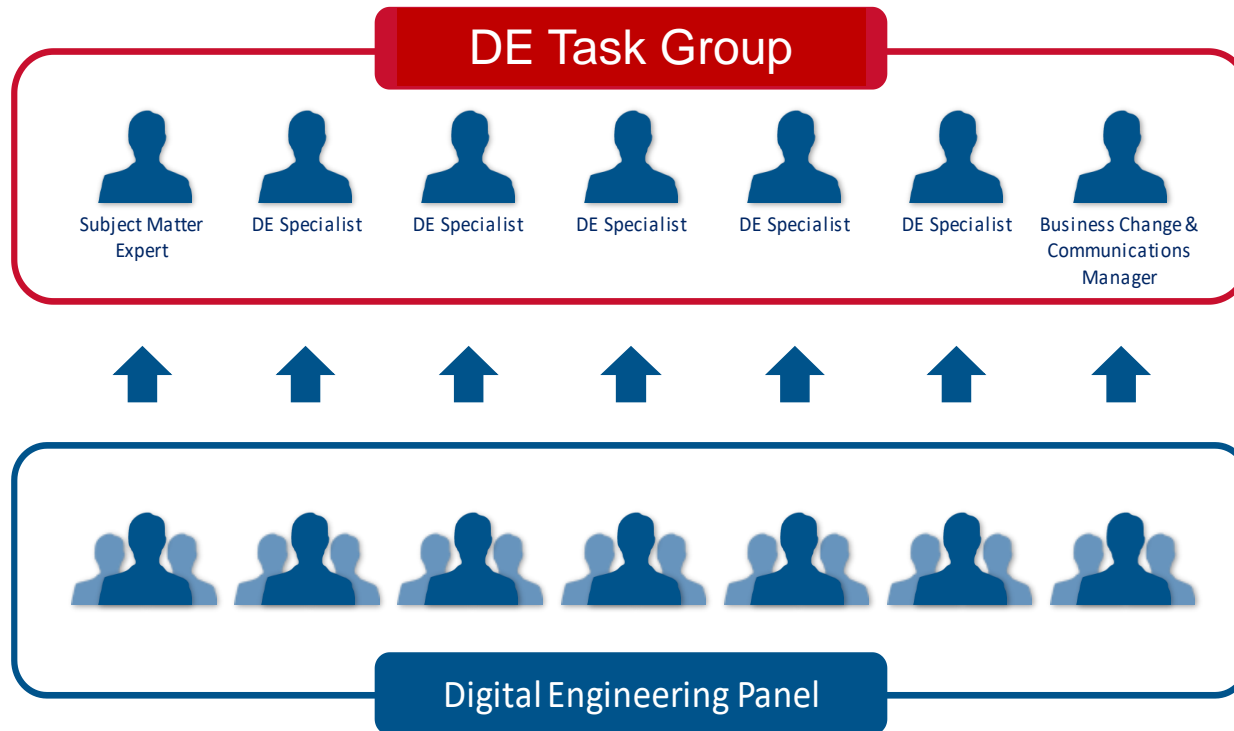

- BCR assumes 1.7% savings in Project Delivery phase only, based on documented lessons learned from the recent I&S project 'North Strathfield Rail Underpass' (NSRU) (\$266M), where DE was **not** used.
- BCR is deemed to be relatively conservative as the benefits were limited to:
  - Cost avoidance rather than overall productivity improvements
  - Construction phase rather than the overall asset lifecycle
- Benefits assumed to be incremental, ramping up to 100% over the course of the DEF Project
- 0.5% Sensitivity test provided to give a lower-limit comparative estimate

# DE Team (Stage 1)

- Team structure based on normative model
- Pending feedback from consultation and industry sounding

# Procurement

# Consultation

# Stakeholders Consulted

## Transport Personnel

No	Agency/ Division	Name	Role
1	ASA	Angelo Koutsoukos	Manager Asset Stewardship
2	ASA	Bob Bennett	Manager, Asset Performance Reporting

# National DE Working Group

TRANSPORT AND INFRASTRUCTURE  
COUNCIL

# Working Group

## Vision

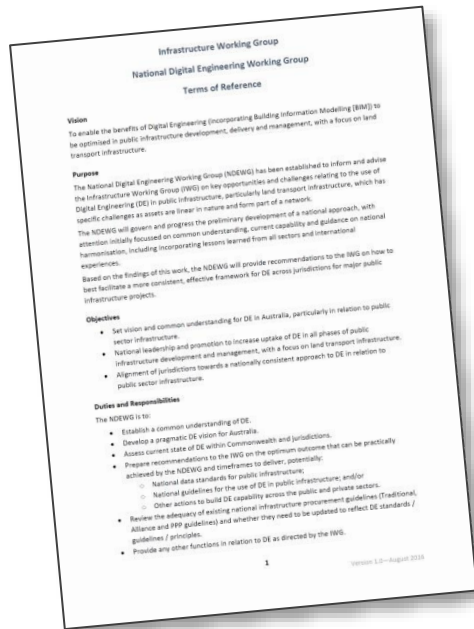

- *“To enable the benefits of Digital Engineering (incorporating Building Information Modelling [BIM]) to be optimised in public infrastructure development, delivery and management, with a focus on land transport infrastructure”.*

## Objectives

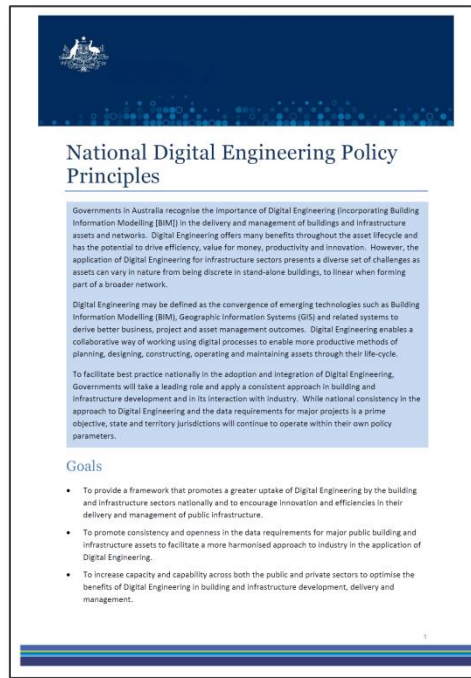

- National DE Policy
- National DE Framework, to promote greater uptake of DE
- Promote open data requirements for infrastructure assets
- Facilitate a more consistent harmonised approach
- Increase capacity and capability (public & private sectors)
- More info out soon..

National Policy  
(Approved 4<sup>th</sup> Nov 2016)

National Survey

# Lessons Learned

Lesson	Details
1. Not just an IT project	<ul style="list-style-type: none"><li>• New technology alone won't achieve results. This is more about organisational change.</li><li>• IT is an important element, however DE must be led from within the business</li></ul>
2. Appoint a sponsor	<ul style="list-style-type: none"><li>• Someone with appropriate seniority, who gets it and owns it</li><li>• Possibly from numerous business groups e.g. PMO, Technical, Asset Mgmt etc</li></ul>
3. Appoint a champion	<ul style="list-style-type: none"><li>• Someone in-house (to retain knowledge) with dedicated capacity &amp; understands agency</li><li>• Someone who can wear numerous hats e.g. strategic, technical, political, comms, sales etc</li></ul>
4. Effective working group	<ul style="list-style-type: none"><li>• Attract diverse membership from across key business units/projects</li><li>• Not just interest group. Must have senior level membership and buy-in</li></ul>
5. Need a vision	<ul style="list-style-type: none"><li>• To align the group, shape the direction and set the objectives</li></ul>
6. Consult, consult, consult!	<ul style="list-style-type: none"><li>• Map the current landscape and new initiatives/interfaces, and</li><li>• Educate other parties and engage them along the journey</li></ul>

# Lessons Learned (..continued)

Lesson	Details
7. This is a journey	<ul style="list-style-type: none"><li>• Group won't have all the answers straight away</li><li>• Business change is complex, with many feedback loops and “unknown unknowns”</li></ul>
8. Develop a staged approach	<ul style="list-style-type: none"><li>• Develop long-term strategy with key milestones/ assurance gates</li><li>• Also address immediate issues e.g. consistent procurement of basic deliverables</li></ul>
9. Seek advice	<ul style="list-style-type: none"><li>• Seek out case-studies to identify best practice and pockets of excellence</li><li>• Consult with your supply chain to understand current capability, strengths, future plans etc</li></ul>
10. Industry specialists	<ul style="list-style-type: none"><li>• “BIM Managers” don't have all the answers. Check their background e.g CAD, architects etc</li><li>• BIM solutions for vertical buildings currently don't necessarily apply to linear infrastructure</li><li>• Need consultants who have a blend of technical understanding and 'business acumen'</li></ul>
11. Global innovation	<ul style="list-style-type: none"><li>• Global industry is developing at a rapid pace</li><li>• Be aware of emerging innovations, e.g. standards, technologies, work practices etc</li></ul>
12. Create sense of urgency	<ul style="list-style-type: none"><li>• Industry is seeking leadership from government clients. Now is the time to act!</li><li>• See HBR paper: <a href="#"><u>“Leading Change - Why Transformation Efforts Fail” by JP Kotter (1995)</u></a></li></ul>
